

Korrex Insulating Bushes

When two metals are in contact and moisture collects between their surfaces, electrolytic corrosion occurs owing to ion-exchange, which attacks the material.

This can be avoided by the use of Korrex insulation bushes of superpolyamide, which are recommended for the following combinations of metals:

- Brass – Iron**
- Aluminium – Steel**
- Iron – Copper**
- Eloxal – Iron**
- Iron – Lead**
- Zinc – Tin**

When used in conjunction with Korrex caps, they are also a protection against corrosion.

Korrex Insulating bushes can be used in conjunction with:

- KORREX caps
- DUBO Retaining Rings
