

KORREX

Protective caps for socket head screws

Because of the many advantages offered by socket head screws in comparison with normal hexagon-head screws, the use of socket head screws is increasing all the time. A disadvantage, however, is the accumulation of dirt in the socket, making them sometimes difficult to unscrew.

This problem is solved in a simple manner by using **KORREX** protective caps.

In addition to their use as protective caps for socket head screws, **KORREX** protective caps can also be used for other purposes, for example to seal the ends of tubes or to seal drilled holes.

In fact the possible uses of **KORREX** caps are unlimited.

Advantages:

- no corrosion of the screw head;
- the screw is easier to undo;
- the protective caps are easy to fit and can be re-used many times;
- they improve the appearance of all assemblies;
- reduced maintenance costs;
- unlimited possible applications.
